User

Hotline Worker, Hotline Supervisor.

Process

This step action table describes the actions needed to view the history of all transfers and assignments for a referral, as well as transfer a referral, and assign primary and secondary workers to a referral.

Introduction

- The history will show a list of all current and historical counties, as well as primary and secondary workers. The list’s default sort will show Open referrals first and then by Start Date with most recent on top.
- The worker will be able to transfer a referral to any other county. However, Hotline County Connection Center (HCCC) will not be an option for the transfer.
- Transferring a referral to another county will move it from the sending county’s Pending Referrals queue to its Pending Outgoing queue. It will also add the referral to the receiving county’s Pending Incoming queue.
- When transferring a referral to another county, the current Primary Worker will be end-dated automatically when the target county accepts, and a “dummy worker” will be assigned in the accepting county. Accepting the referral moves the referral from the accepting county’s Pending Incoming Queue to its Pending Referrals queue.
- The worker will be able to assign a referral to another Primary Worker within the responsible county. When assigning a Primary Worker, the recipient Primary Worker must be a Hotline or Generalist worker with the appropriate training certification level.
- When assigning a referral to another worker, the current Primary Worker will be end-dated automatically for the same date/time as when the new Primary Worker starts.
- The worker will be able to assign one or more Secondary Workers to the referral. When adding a secondary worker, the start date will default to the current date and time. However, this date will be editable.
